150 cable tray for T-junction

Overview

AS85.150 Effortless T-junction for joining cable trays of different widths. Reduced waste and available in multiple heights. GI Cable Tray Bend 150 mm x 50.

Key Takeaways

A 150 mm cable tray T-junction allows branching of cable trays at right angles, typically using galvanized iron or modular accessories for efficient and durable cable management.

Overview

A T-junction (Tee bend) is used to split a cable tray into three routes: two straight paths and one perpendicular branch, enabling organized cable routing in electrical or data installations. For a 150 mm tray, the T-junction is designed to match the tray width and maintain structural integrity while allowing smooth cable transitions.

Types and Materials

Galvanized Iron (GI) T-junctions: These are commonly used for 150 mm trays, offering strength, durability, and corrosion resistance, suitable for both indoor and outdoor applications. Modular Accessories (e.g., AS35. 150): These allow joining trays of different widths without loss of functionality.

They reduce waste by enabling the use of interlocking tray ends and are available in multiple heights (35 mm, 85 mm, 110 mm) with a precise 100 mm radius for smooth cable flow. Sendzimir Galvanized Steel T-pieces: Provide additional protection against oxidation through a zinc coating, ensuring long-term durability and compliance with environmental standards.

Applications

Commercial buildings: For structured cabling and electrical distribution. Industrial facilities: For heavy-duty power and control wiring. Data centers: To manage high-density cabling efficiently.

Installation Considerations

Ensure the T-junction matches the tray width and height for seamless integration. Verify material compatibility with existing trays to prevent galvanic corrosion. Follow manufacturer guidelines for load capacity, spacing, and support to maintain safety and compliance with standards.

Use accessories that allow easy branching without cutting trays, which reduces installation time and material waste. By selecting the appropriate 150 mm T-junction, you can achieve a durable, organized, and flexible cable management system suitable for various electrical and data applications.
