576 Fiber Optic Distribution Frame

Overview

Three-in-one 720-core fiber distribution frame 576-core odf optical. Powerful functionality: three networks in one, all-in-one cabinet solution! 576 Core.

Key Takeaways

A 576-core fiber optic distribution frame (ODF) is a high-density, 19-inch rack-mounted solution designed for efficient fiber management, splicing, and distribution in data centers and telecom networks.

Overview

A 576-core ODF is a high-capacity fiber distribution frame suitable for large-scale optical networks, including data centers, FTTH central offices, and multi-operator telecom environments. It supports both ribbon and non-ribbon fibers and allows for pre-terminated or field-spliced connections. These frames are typically 19-inch rack-mounted, with modular tray systems for flexible fiber management.

Key FeaturesHigh-Density Capacity: Supports up to 576 fiber cores, often with multiple splice trays (e.g., 12-48 trays) for organized fiber splicing and storage. Standards Compliance: Designed according to IEC, TIA/EIA, RoHS, and telecom standards for reliable performance and interoperability. Flexible Installation: Can be wall-mounted or back-mounted, allowing parallel layouts and easy integration into existing racks or large groups of ODFs.

Fiber Protection: Fully enclosed structure with dust-proof design, maintaining proper fiber bend radius and preventing damage during operation. Adapter Compatibility: Supports SC, FC, and ST adapters, with angled connections (typically 30°) to protect fibers and improve safety during handling. Modular Design: Internal drawer trays integrate distribution and splicing, enabling easy expansion and maintenance.

Applications

Data Centers: High-density interconnections and fiber management for enterprise and hyperscale environments. Telecom Networks: Suitable for metro backbones, FTTH central offices, and multi-operator joint construction projects. Industrial Automation: Reliable optical distribution for control systems and power generation facilities.

Broadcast and Media: Integration of multiple network operators and broadcast TV signals in a single cabinet.

Advantages

Space Efficiency: Maximizes fiber connections per rack unit, reducing footprint in data centers. Scalability: Modular trays and adapter slots allow incremental expansion as network demands grow. Durability: Electrostatic-sprayed steel frame ensures long-term reliability and aesthetic appearance.

Ease of Maintenance: Front-access design allows all operations from the front, simplifying fiber management and troubleshooting.

Summary

The 576-core fiber optic distribution frame is a versatile, high-density solution for modern optical networks. It combines robust construction, modularity, and standards compliance to support large-scale deployments in telecom, data centers, and industrial applications, ensuring efficient fiber splicing, distribution, and long-term network reliability.
