Anti-vibration cable tray manufacturer

Overview

Our profiles are compatible with all cable tray and cable ladder types, guaranteeing perfect alignment, stability, and load distribution.

Key Takeaways

Leading manufacturers of anti-vibration cable trays include Trelleborg, Schiavetti Tekno, ABB, Tianhong, and German companies like Icotek and Tsubaki Kabelschlepp.

Key Manufacturers

Trelleborg specializes in anti-vibration solutions for cable management, offering flexible and durable cable entry systems suitable for onshore and offshore applications. Their products include single and multi-gate entry solutions with IP54 and IP67 ratings, designed to reduce vibration and protect cables while allowing easy installation and maintenance. Schiavetti Tekno (Spina Group), based in Italy, manufactures high-quality cable trays including perforated, ladder, wire-mesh, and closed-bottom types.

Their systems are designed for industrial environments, providing strength, corrosion resistance, and thermal expansion management, which indirectly helps reduce vibration effects on cables.

AB

B offers a wide range of cable tray systems, including perforated trays, cable ladders, and strut channels. Their designs focus on reliability, adaptability, and long-term performance, with open designs that reduce moisture buildup and cable insulation damage, contributing to vibration mitigation. Shandong Tianhong Electric Power Technology Co., Ltd. in China produces cable trays and accessories for industrial and commercial projects.

Their systems include heavy-duty solutions for long cable runs, excellent ventilation, and heat dissipation, which help minimize vibration impact on cables. German Manufacturers such as Icotek and Tsubaki Kabelschlepp provide advanced cable management systems with EMC solutions and precision engineering. These companies offer products designed for industrial and high-tech applications, ensuring vibration-resistant cable routing and secure installation.

Considerations for Anti-

Vibration Cable Trays

Material and Design: Stainless steel, galvanised steel, and powder-coated trays provide durability and vibration damping. Perforated and ladder designs allow airflow and reduce resonance. Customization: Many manufacturers offer tailored solutions to fit specific project requirements, including tray size, load capacity, and vibration isolation features.

Compliance: Ensure products meet international standards (EN, UL) for safety, electrical continuity, and mechanical performance. These manufacturers provide global support and technical assistance, making them suitable for industrial, infrastructure, and energy projects where vibration control is critical.
