Key Takeaways

Angkor Calibration Technology Co. Ltd. in Cambodia offers professional calibration services suitable for BERT and other electronic measurement instruments.

Overview of BERT Calibration

A Bit Error Rate Tester (BERT) is used to evaluate the performance of digital communication systems by generating test patterns, transmitting them through a device or network, and measuring the number of bit errors at the receiver end.

Accurate BER

T calibration ensures that the instrument correctly measures bit error rates, which is critical for assessing network integrity, transmitter/receiver performance, and optical or Ethernet links. Calibration typically involves: Setting the data rate, modulation scheme, and signal levels according to the system under test. Verifying the accuracy of the PRBS (Pseudorandom Binary Sequence) generator and error detection circuitry.

Adjusting internal parameters to match reference standards or traceable measurement equipment.

Calibration Services in Cambodia

Angkor Calibration Technology Co. Ltd. (AngkorCal), established in 2024, provides a wide range of calibration services, including electronics and measurement instruments, which encompass devices like BERTs. Key features of their service include: In-house and on-site calibration: Instruments can be calibrated at the laboratory or at the client's location.

Mobile calibration laboratory: Enables calibration at project sites, ideal for large-scale network deployments. Compliance with ISO/IEC 17025: 2017 standards: Ensures traceable and internationally recognized calibration results. Equipment support: Includes calibrators, transfer standards, and simulators necessary for precise BERT calibration.

Annual maintenance contracts and rental services: For ongoing calibration needs or temporary project requirements.

Practical Considerations

When arranging BERT calibration in Cambodia: Confirm that the calibration provider can handle high-speed digital test equipment and supports the specific data rates and interfaces of your BERT. Ensure that the calibration includes verification of error detection accuracy and signal integrity checks. Consider on-site calibration if the BERT is integrated into a live network or difficult-to-move setup.

By using a certified provider like AngkorCal, organizations in Cambodia can maintain accurate and reliable BER measurements, supporting network performance validation, service activation, and compliance with telecommunications standards.
