CIF Price Optical Line Terminal NRZ

Overview

CIF Price ONT Optical Network Terminal LPO An optical line termination (OLT), also called an optical line terminal, is a device which serves as the service.

Key Takeaways

The CIF price of an Optical Line Terminal (OLT) with NRZ technology is calculated by adding the product cost, insurance, and freight charges to the buyer's destination port.

Understanding CIFCI

F (Cost, Insurance, and Freight) is an Incoterm where the seller covers the cost of the goods, shipping, and minimum insurance until the goods reach the buyer's port of destination. The risk transfers to the buyer once the goods are loaded onto the vessel at the port of origin, but the seller must provide insurance covering at least the contract value plus 10% for the buyer's protection. This ensures the buyer knows the total cost upfront, including transport and insurance.

Optical Line Terminal Pricing

The Cisco NC

S 1010 Optical Line Terminal is available in multiple configurations, including C-band and L-band, with or without Raman amplification, and enhanced versions. Prices vary depending on the model and features. For example, the base price of an NCS 1010 OLT can be obtained from Cisco's global price list, which serves as the Cost (C) component in CIF calculation.

Calculating CIF Price

To estimate the CIF price for an NRZ OLT: Cost of Goods (C): Base price of the OLT from the supplier or Cisco price list. Insurance (I): Typically 1–2% of the product value, covering transit risks. Freight (F): Shipping charges from the seller's port to the buyer's destination port.

Formula: CIF Price = Cost of Goods + Insurance + Freight Example: OLT base price: $50,000Insurance: $1,000Freight: $2,500CIF Price = $50,000 + $1,000 + $2,500 = $53,500 This total represents the landed cost at the destination port, after which the buyer is responsible for unloading, import duties, and local transportation.

Practical Considerations

Confirm the exact OLT model and configuration to get an accurate base price. Negotiate insurance coverage if higher than the minimum is required. Freight costs vary by shipping method, distance, and carrier.

CI

F is most suitable for sea or inland waterway transport; for air shipments, other Incoterms like CIP may be more appropriate. By using this approach, you can determine the CIF price for any NRZ Optical Line Terminal and plan your import budget accurately.
