Cable tray installation is more expensive than concealed installation

Overview

□□ Myth: Cable trays are always cheaper. Truth: Modern conduit materials and techniques can optimize both cost and protection. □□. Depending on the type of circuits and the wiring density, an installed cable tray wiring system may result in a total cost reduction (material + labor) of up to 60 percent compared to the cost of an equivalent conduit wiring system. Conduit installation is mechanically intensive. In real EPC and industrial projects, the final installation cost depends on multiple engineering factors, including tray size, installation height, routing complexity, support spacing, labor conditions, and project environment. Cable trays are more preferable in large buildings or factories since they are not closed and can be readily repaired.
