Can a server rack be used as a power distribution cabinet

Overview

PDUs can be mounted inside your server rack wherever you need a source of power for your equipment. You can mount them vertically along the side rails or in the back of the enclosure, or horizontally within the rack, in the same space as a server. Each rack must safely deliver stable electrical power to dozens of servers, switches, and storage devices while maintaining reliability, airflow efficiency, and electrical safety. Modern infrastructures. From the utility grid to the server rack, Data Center Power Flow moves through multiple layers of protection, transformation, conditioning, and distribution to ensure uptime and reliability. There are three primary rack types - open-frame racks, enclosed cabinets, and wall-mount racks, each suited for. In a data center, power distribution is not just an engineering system behind the wall.
