Comoro Distribution Box Manufacturer Installation Method

Overview

With over 30 years experience in the design, manufacture, supply, and installation of copper and aluminium AC/DC busbar and associated products, G Corner can help you no matter what your need...

Key Takeaways

Distribution boxes in Comoro are manufactured to meet indoor and outdoor electrical standards and can be installed using hanging, wall-embedded, or floor-mounted methods.

Types of Distribution Boxes and Manufacturing

Distribution boxes are generally classified into indoor and outdoor types, made from 2mm thick iron plates with double doors for boxes longer than 600mm. Indoor boxes are suitable for offices and production areas, while outdoor boxes are designed for transformer stations, lighthouses, and other exposed locations. Manufacturers equip these boxes with main disconnectors, shunt leakage circuit breakers, terminal blocks, fuses, and sockets, ensuring proper phase sequence and vertical installation of components for safety and efficiency.

Advanced models may include Residual-Current Devices (RCDs) or RCBOs for additional protection. All boxes are grounded, and protective neutral wires are connected through terminal boards to prevent electrical hazards.

Installation Methods

Manufacturers typically recommend three installation methods: Hanging Type: The box is mounted on brackets or supports, suitable for wall surfaces where floor space is limited. Wall Embedded Type: The box is recessed into the wall, providing a concealed installation for aesthetic or space-saving purposes. Floor Type: The box is placed on the floor, often used for larger or heavy-duty distribution boxes, sometimes with doors on both sides for maintenance access.

Installation Guidelines

Site Selection: Install the box close to the main power supply, in a dry, well-ventilated area, away from water, flammable, or corrosive substances. Height and Fixing: Residential boxes are typically installed 1. 5 meters above the ground, while industrial boxes depend on surrounding equipment.

Use metal plugs, bolts, or mounting brackets to ensure stability. Wiring: Turn off power before wiring. Use high-temperature resistant copper wires with proper cross-sectional area.

Connect line, neutral, and ground according to color codes, and secure wires neatly with cable ties. Protection and Sealing: Outdoor boxes must be sealed against dust and rain. Anti-corrosion treatment includes painting the bottom and applying two layers of gray paint.

Testing: After installation, perform insulation resistance tests and verify circuit continuity. Check that all breakers, fuses, and components operate correctly.

Maintenance Considerations

Leave sufficient space around the box for ventilation and maintenance. Label all circuits clearly for troubleshooting. Ensure busbars and terminals are free from rust or contaminants before connecting.

Regularly inspect outdoor boxes for water ingress or corrosion. By following these manufacturing and installation standards, Comoro distribution boxes can provide safe, reliable, and efficient electrical distribution for residential, commercial, and industrial applications.
