Construction site electrical distribution box board

Overview

A construction site distribution board is a specialized type of panel used to manage and distribute electrical power on temporary job sites. Unlike residential or industrial panels designed for long-term installations, these boards are built for mobility, durability, and flexibility. The robust sheet steel housing has been. The steel sheet enclosure is fitted with double lock doors to prevent non-authorised persons from accessing connection and disconnection operations. The panels are made in a sturdy and handy two-component technopolymer cabinet with a fire-resistant backrest, which allows them to be stored and reused in. Our site power distribution equipment is designed to withstand the tough conditions of construction sites and is used to supply temporary power to site cabins, heaters, lighting, tools and plant equipment.
