Current Status of Fiber Optic Communication Development in Finland

Overview

At the end of September 2024, fibre-optic network connections were available to 68% of Finnish households. In addition, 75% of households could opt for a fixed connection with a minimum download speed of 1 Gbps. Traficom has published new availability data as part of its situational picture on the. The Finnish authorities favour a competition-driven, fibre-based network roll-out assisted by public funds for underserved areas and advice for local municipalities on how to deploy digital connectivity networks. The Digital infrastructure strategy and Finland's digital compass support the EU's. This situational picture examines the availability of fixed broadband connections in Finland as well as subscription numbers and usage volumes. The data is mainly gathered from telecommunications operators. As of December 2025, 5G connections with speeds of at least 100. On 28 January 2026, the Ministry of Transport and Communications published an interim review of the project on security and new economic growth from communication networks, known as the TUUTTI project.

Article Content

Digital connectivity in Finland

By 2025 all households should have access to at least 100 Mbps connections. It should be possible to increase the speed of the connection to 1 Gbps. Cost-efficient construction of optical fibre networks

Development of fixed communications networks in Finland

At the end of September 2025, broadband networks based on optical fibre covered 80% of households in Finland, corresponding to almost 2,3 million households. Availability increased by

Broadband Coverage in Finland: Key Figures

According to Traficom, fibre-optic networks were available to 80 percent of Finnish households in September 2025. Availability increased by 12 percentage points compared to 2024.

Communication networks at heart of Finland''s security and economic ...

In many areas the basic fibre infrastructure is modern, but access to fibre connections remains below that of the other Nordic countries and varies considerably between regions. Space

Finland: EU approves €4.67 million to strengthen Finnish

Finland, 21 November 2025 – Finland''s Ministry of Transport and Communications has confirmed that the European Commission will allocate €4.67 million in Connecting Europe Facility (CEF) funding to

Traficom

At the end of September 2024, Finland''s fibre-optic broadband network was made available to nearly 2 million homes, or 68% of Finnish households, representing a 7 percentage-point

NIB and Valoo to expand high-speed internet access in Finland

Although Finland is a pioneer in digitalisation, excelling in areas such as wireless 4G and 5G networks, the availability of digital services, and data consumption, it lags many other European

Sisu Blowing Limits: Cable Crew Sets New Fiber Milestone

Finland is paving the way for a highly connected future with major strides in fiber network expansion. This progress, driven by strategic investments and cutting-edge technologies, is closing
