Delivery Period Access Switch SFP

Overview

What is an SFP Port on a Gigabit Switch?

A Comprehensive GuideDiscover what an SFP port on a Gigabit switch is, types of SFP ports, their differences from.

Key Takeaways

The delivery period for access switches with SFP ports typically ranges from 1 to 6 weeks, depending on the vendor, model, and stock availability. Factors Affecting Delivery Time1. Vendor and Manufacturer Stock: Popular models from Cisco, TP-Link, or Meraki may ship within 1–2 weeks if in stock, while specialized or high-capacity SFP switches may require 4–6 weeks due to limited inventory or production schedules.

2. Switch Type: SFP switches (1G) are generally more common and may have shorter lead times. SFP+ switches (10G or higher) often have longer delivery periods due to higher demand and lower stock levels.

3. Customization and Modules: If you require specific SFP or SFP+ transceivers (single-mode, multi-mode, or copper), delivery may be extended, especially for third-party or non-standard modules. 4.

Shipping and Location: International shipping or remote locations can add additional days or weeks to the delivery period. Typical Procurement TimelineIn-stock standard access switch: 1–2 weeksHigh-performance or modular SFP switch: 3–6 weeksCustom configurations with specific SFP modules: 4–8 weeksRecommendationsCheck vendor stock before ordering to avoid delays. Consider modular switches that allow you to add SFP modules later, reducing initial lead time.
