# Does the operator allow the use of a splitter

## Overview

You can use a splitter operator to distribute the rows from a data set into different output streams based on values in specified columns. Type a description to record additional information about the highlighted operator. The scenario: Incoming message is a large composite message and in order to be processed through SAP Cloud Platform. I have a src-table with a column, in which 2 different ID-codes appears mixed from row to row. Now I want to split this into 2 columns in a target table. Is that the right way ?

or shold I use something different ?

API8003: Connection. Hardware refers to the physical parts of the computer, like the central processing unit (CPU), memory, storage devices, input/output devices (like keyboards and screens), and other peripherals (extra devices connected to the computer). Software refers to the programs and applications that tell the. A log splitter uses hydraulic pressure to force a log against a stationary wedge, splitting it along the grain with massive, controlled force.
