Dual UPS Distribution Box

Overview

The ATS Type Dual Power Distribution Box is designed to provide seamless and automatic switching between primary and backup power sources, ensuring continuous power supply for critical systems. With the compact parallel switch panel, users can set up a parallel system without needing to restructure an existing low-voltage main distribution system. This low-voltage distribution box offers reliable performance and high safety standards, making it ideal for. In paralleling, two or more UPSs are electrically and mechanically connected to form a unified system with one output—either for extra capacity or redundancy. In an N+1 redundant configuration, you would have at least one more UPS module than needed to support the load. As a conjoined system, each.
