Factory Specifications for Ribbon Optical Cables

Overview

Designed to meet the demands of today''s data-intensive world, these cables are comprised of multiple optical fibers bundles in a flat ribbon format that is high density, lightweight, and durable.

Key Takeaways

Ribbon optical cables are high-density fiber optic cables designed for mass-fusion splicing, offering fiber counts from 4 up to 6,912 fibers in compact, flat or flexible ribbon formats.

Key Features and Specifications

Ribbon fiber design: Ribbon cables organize multiple optical fibers in a flat, matrix-style ribbon, typically containing 4, 6, 8, or 12 fibers per ribbon. This configuration allows mass-fusion splicing, where all fibers in a ribbon can be spliced simultaneously, significantly reducing installation time and labor costs compared to traditional stranded loose-tube cables. Fiber counts and density: Ribbon cables support a wide range of fiber counts.

Standard offerings include up to 288 fibers in outdoor cables, while advanced technologies like Sumitomo's Freeform Ribbon® and Prysmian's FlexRibbon® can reach 6,912 fibers in a single cable. The compact design reduces cable diameter by up to 60% and optimizes duct space. Fiber types and standards: Ribbon cables can use single-mode fibers such as G.

652. D, G. 657.

A1, or G. 657. A2, with color coding following TIA/EIA-598 or YD/T standards.

Color sequences can be customized for high fiber counts. Construction and durability: Ribbon cables are available in outdoor, indoor, plenum-rated, air-blown, and armored designs. They are lightweight, durable, and often gel-free, which simplifies splicing and reduces maintenance.

Indoor plenum cables feature flame-retardant jackets and flexible dielectric members for easy installation in space-constrained areas.

Notable Models and Technologies

Corning Ribbon Cables: High-density, flat ribbon cables designed for fast installation and reduced downtime, supporting mass-fusion splicing of 12 fibers per ribbon. Zion Communication Ribbon Cables: Outdoor high-density cables with fiber counts up to 288, suitable for backbone networks, FTTH feeder, and distribution networks. Sumitomo Freeform Ribbon® Cables: Patented technology enabling up to 6,912 fibers, optimizing duct space and reducing deployment time by up to 80%, available in OSP, indoor/outdoor, and armored variants.

Prysmian FlexRibbon® Technology: Intermittently bonded ribbon (IBR) cables offering flexibility, high fiber density, and compact design, supporting up to 6,912 fibers and multiple cable constructions including microduct and flame-rated designs. Sumitomo Standard Ribbon Indoor Plenum Cables: Up to 432 fibers, featuring Easy Split & Peel technology for simplified handling and MPO connectorization, ideal for intra-building applications.

Applications

Ribbon optical cables are ideal for high-capacity networks, including: Data centers and backbone networksFTTx deployments and FTTH feeder/distribution5G infrastructure and core networksSpace-constrained indoor installations Their high fiber density, mass-fusion splicing capability, and compact design make them suitable for projects requiring fast deployment, high bandwidth, and efficient duct utilization. In summary, ribbon optical cables provide a versatile, high-density solution for modern fiber networks, with multiple models and technologies tailored for both indoor and outdoor applications, supporting fiber counts from a few dozen to several thousand fibers.

Ribbon Fiber Optic Cable

Designed to meet the demands of today''s data-intensive world, these cables are comprised of multiple optical fibers bundles in a flat ribbon format that is high density, lightweight, and durable.

Product Spec Sheet 144EC7-14101-20

Corning ribbon riser cables are all-dielectric and designed for indoor use. The optical fibers are organized into easily identifiable 12-fiber ribbons inside a central tube. The required tensile

RocketRibbon Solutions Guide

The cables are comprised of multiple optical fibers bundled together in a flat ribbon format that is high density, lightweight, and durable for easy handling and installations in tight spaces and extreme

Ribbon Fiber Cable | FS

Non-Armor, Multi-core, Indoor Ribbon Cable These cables are organized with 8/12-fiber ribbons inside a central tube that are surrounded by dielectric strength members and a specially formulated flame

Ribbon Cable | Plenum/Riser Fiber Cable | Leviton Network Solutions

Leviton offers ribbon fiber optic cables in a range of constructions with fiber counts up to 432F, suitable for a variety of indoor and outdoor applications. Ribbon cable offers significant space savings for high

Optical Ribbon Fibre Cables

Whether for Data Centre connectivity, backbone, core network, FTTx or 5G deployment, Sumitomo''s patented Freeform Ribbon® cables bring a high-density

Freeform Ribbon™ OSP Slotted-Core Cables

Dry cable construction and Sumitomo Electric''s ribbon-splicing technology afford huge savings in deployment time and cost. Instructions: please refer to the ''

CORNING OPTICAL COMMUNICATIONS GENERIC SPECIFICATION

2.0 Fiber Specifications 2.1 Detailed information on the cabled performance of the fiber types available for this cable design can be found in the following documents: 2.1.1 Dispersion Un-shifted Single
