Fiber Optic Cable Gom

Overview

Separately, BP owns and operates The Gulf of Mexico BP Fiber Optic Network (BP GoM Fiber), a 1200 km subsea fiber cable system providing BP and other operator's production facilities with high speed data communications. 15% of its revenues in the GoM. Tampnet recently announced the closing of its acquisition of Broadpoint LLC (“Broadpoint”), a pioneer within offshore communications to the Oil & Gas (“O&G”) industry in the Gulf of Mexico (“GoM”). We believe an independent telecoms operator will be attractive to new customers and we are committed to delivering the same high level of communications as. conference & convention enabling the next generation of networks & services BP GoM: A Case Study of a Next Generation Undersea Fiber Optic System for Oil and Gas Applications Rob Munier Jeremiah Mendez Derek Buffitt Tyco Electronics conference & convention BP GoM: A Case Study of a Next Generation. A fiber optic cable is a transmission medium that uses strands of glass or plastic fibers to carry data as pulses of light. It offers high bandwidth, low signal loss, and resistance to electromagnetic interference (EMI), making it ideal for modern high-speed networks. Fiber optic cables are widely.
