Fireproof cable tray installation in Ireland

Overview

Instrument FireMaster® fire protection cable trayThe FireMaster® cable tray wrap system provides 30 minutes hydrocarbon fire protection to cable trays carr.

Key Takeaways

Fire-resistant cable trays in Ireland should be installed using certified fire-rated systems, proper firestopping, and compliance with I. S. 10101/BS 7671 standards.

Fire-

Rated Cable Tray SystemsFire-resistant cable trays are available in ladder, tray, basket, and trunking formats, designed to protect electrical and control cables during a fire. Systems such as OBO Bettermann GR-Magic® trays and FireMaster® wraps provide robust fire protection while allowing fast and efficient installation. These systems are suitable for both internal and external environments and can be used for instrument control cables, power, and communication lines.

Installation Practices

Prefabricated Bracketry: Using prefabricated brackets ensures consistent alignment, reduces installation time, and minimizes rework. Cable Loading: Side-loading of cables is recommended for organized installation and maintenance. Banding and Wrapping: FireMaster® wraps use steel banding straps at regular intervals to secure the insulation around trays, ensuring 30 minutes of hydrocarbon fire protection for control cables.

Environmental Protection: Additional weatherproofing, such as corrugated aluminium sheeting, can be applied for outdoor installations.

Firestopping and Penetrations

When cable trays pass through walls, slabs, or shafts, openings must be sealed with fire-rated materials such as mineral wool, firestop packs, or mastic. Key points include: Gaps around cables should not exceed 1 cm^2. Packing thickness should be at least 24 cm.

Cover plates should be square, consistent, and painted evenly. Large openings may require a fire-resistant backing plate before sealing.

Compliance and Standards

Installations in Ireland should comply with I. S. 10101 and BS 7671, integrating RAMS and ISO 45001 safety processes.

Q

A gates and staged inspections ensure first-time-right installation, protecting critical project timelines. Fire-rated systems should be documented with as-built drawings and certification for handover.

Practical Considerations

Efficiency: Prefabricated and modular systems reduce labor and installation time. Durability: Fire-resistant coatings and wraps protect against UV, moisture, chemicals, and flame propagation. Maintenance: Systems should allow easy access for inspection and cable replacement without compromising fire protection.

By following these guidelines, fire-resistant cable trays in Ireland can be installed safely, efficiently, and in full compliance with local and international fire safety standards.

Instrument FireMaster® fire protection cable tray

The FireMaster® cable tray wrap system provides 30 minutes hydrocarbon fire protection to cable trays carrying control cable wiring. The FireMaster® cable tray wrap consists of FireMaster® Marine Plus

Containment Installation

DTE delivers fire-rated ladder, tray, basket and trunking systems, installed with prefabricated bracketry and first-time-right QA gates to keep your programme on schedule and compliant.

Containment and tray – Dm electric services Ireland

© 2026 FD SOLUCIONES OPTICAL SYSTEMS - All rights reserved

Whether you''re setting up a new installation or upgrading an existing one, our team can design and install a containment system that suits your specific requirements, ensuring compliance with safety

Steel Cable Containment

We offer both standard and fire-rated containment systems that can be used in either internal or external environments, assuring you of safe and reliable cable

Certified Fireproofing Installation

We provide the following services. Get in touch for a consultation and see how your project can benefit from our expertise.

Firestopping

GF Firestop LTD Is are a Third Party accredited contractor in the application of fire stopping and sealing to service voids/penetrations in fire rated compartment

Fire protection for cables & cable trays | Flamro

With our fire protection for cable systems, we ensure that your lines meet the highest safety standards and are reliably protected in the event of an emergency.

Sealing Solutions

For these critical specifications, Hilti multi-cable transit (MCT) systems deliver you a high-performance but practical solution for creating fire-, water- and gas-resistant

TKA Firestopping Specilaists Ltd | Fire Protection

We provide solutions in the specification and installation of passive fire protection systems throughout Ireland. We are IFC third party certified, which is UKAS accredited and internationally recognised.

Technical Guidelines for Cable Tray Installation and

Cable tray installation must comply with specific technical standards to ensure electrical safety, system reliability, and long-term maintainability. This document
