Garbage stored in Finnish electrical distribution box

Overview

Producer responsibility obligations apply to electrical equipment, batteries and accumulators and packaging.

Key Takeaways

Storing garbage in electrical distribution boxes in Finland is unsafe and non-compliant with Finnish waste and electrical regulations.

Safety and Legal Considerations

Electrical distribution boxes are designed solely for housing electrical components and wiring. Placing garbage inside these boxes poses serious safety risks, including fire hazards, electrical short circuits, and potential damage to the electrical system. Finnish legislation and safety standards require that electrical equipment be used according to its intended purpose, and misuse can violate both safety regulations and environmental laws.

Waste Electrical and Electronic Equipment (WEEE) RegulationsElectrical and electronic equipment (EEE) in Finland must be collected and disposed of separately from general waste.

The WEE

E Directive mandates that producers and distributors are responsible for the proper collection, recycling, and recovery of EEE. Equipment must bear a crossed-out wheelie-bin symbol, indicating it should not be discarded with household waste. Storing discarded EEE or other garbage in distribution boxes bypasses these legal requirements and can result in regulatory violations.

Producer and Distributor Responsibilities

Distributors of electrical equipment are obligated to take back discarded products free of charge at points of sale and ensure proper recycling. Producers are responsible for financing the collection and treatment of their products. Consumers are encouraged to deliver waste EEE to designated collection points rather than storing it in electrical infrastructure.

Information on nearby collection points is available at kierratys.info.

Environmental and Compliance Implications

Improper storage of garbage in electrical boxes can hinder environmentally sound waste management and reduce the efficiency of WEEE recovery systems. Finnish authorities emphasize separate collection, recycling, and safe disposal to protect human health and the environment. Compliance with these regulations ensures that hazardous materials, such as batteries or electronic components, are safely handled and do not contaminate the environment.

Recommended Action

Do not store garbage or discarded EEE in electrical distribution boxes. Use designated collection points for electrical and electronic waste. Follow producer and distributor guidance for take-back and recycling.

Report unsafe storage in public or shared electrical infrastructure to local authorities or the building manager. By adhering to these guidelines, you ensure safety, legal compliance, and environmental protection in Finland.

Waste and recycling

The property''s own waste collection point enables the recycling of most types of waste. We also take care of the emptying of sludge in cesspools and septic tanks belonging to residential properties.

Electric and electronic equipment

Electrical scrap is collected separately so that the materials contained in the equipment can be utilised. This also allows harmful substances, such as lead and mercury, to be recovered from the equipment.

The Finnish waste management system

Majority of the municipalities have assigned most of their operational waste management duties to local waste management companies owned by municipalities (all together 26 companies).

Treatment of WEEE

The reuse and recycling of electrical and electronic equipment collected by Elker takes place in Finland, and the recycled materials are delivered to both the Finnish and international markets.

Waste Sorting in Helsinki

Fluorescent tubes and compact fluorescent bulbs count as electrical equipment, but they can also be delivered to collection points for dangerous waste. Electrical equipment must not be put in mixed
