High-Cost Special Optical Cable OS2

Overview

OS2 Fiber Optic Cables are available at Mouser Electronics. Mouser offers inventory, pricing, & datasheets for OS2 Fiber Optic Cables.

Key Takeaways

OS2 is a single-mode fiber optic cable designed for long-distance, high-performance applications, offering superior bandwidth and low signal loss compared to multimode or OS1 fibers. Overview of OS2 FiberOS2 cables are single-mode optical fibers with a core diameter of approximately 9µm, optimized for long-distance transmission at wavelengths of 1310nm and 1550nm. Unlike multimode fibers (OM1–OM5), which have larger cores and are suitable for short-distance applications, OS2 fibers support a single light path, minimizing modal dispersion and enabling higher bandwidth over longer distances.

OS2 is an advanced version of OS1, specifically designed for outdoor, backbone, and campus network deployments.

Key Features

Distance and Performance: OS2 cables can transmit data up to 10 km at 1310nm and 40 km at 1550nm, making them ideal for inter-building or long-haul connections. Construction: Typically available in loose tube or tight-buffered designs, with options for armored or unarmored protection to withstand harsh environments. Data Rates: Supports high-speed Ethernet connections, including 1G, 10G, 40G, 100G, and 400G, suitable for modern data centers and industrial networks.

Low Attenuation: Offers low insertion loss (~0. 4 dB/km), ensuring minimal signal degradation over long distances. Compliance: Meets international standards such as ISO/IEC 11801, ITU-T G.

652/G. 657, and EN 50173, ensuring compatibility and reliability. ApplicationsOS2 fiber is commonly used in: Data centers for high-speed interconnects between racks or buildings.

Telecommunication networks for backbone and metro-area links. Industrial and commercial facilities where long-distance, high-bandwidth connections are required. Emergency systems like fire alarms and voice evacuation networks, where reliability is critical.

Cost ConsiderationsOS2 cables are generally more expensive than multimode fibers due to: The need for precision laser sources for single-mode transmission. Specialized manufacturing for low-loss, long-distance performance. Optional armoring and outdoor-rated jackets for durability in harsh environments.

Summary

For projects requiring long-distance, high-bandwidth, and low-loss optical connections, OS2 single-mode fiber is the preferred choice. Its advanced design, compliance with international standards, and suitability for high-speed Ethernet make it a high-cost but high-performance solution for modern networking and industrial applications.
