High-speed transimpedance amplifier products

Overview

Transimpedance Amplifiers | Delivering World Class Marvell's transimpedance amplifier (TIA) portfolio powers PAM4 and Coherent-based pluggable optical modu.

Key Takeaways

Some high-speed transimpedance amplifiers include the OPA847, OPA846, OPA843, and OPA657, offering GHz-range gain-bandwidth products suitable for fast photodiode applications.

Key High-

Speed TI

A OptionsOPA847: Bipolar input, 3. 9 GHz gain-bandwidth product (GBP), 0. 85 nV/√Hz input voltage noise, ideal for ultra-fast photodiode signals.

OPA846: Bipolar input, 1. 75 GHz GBP, 1. 2 nV/√Hz noise, suitable for high-speed optical detection.

OPA843: Bipolar input, 800 MHz GBP, 2 nV/√Hz noise, a lower-speed option for moderate bandwidth requirements. OPA657: FET input, 1. 65 GHz GBP, 4.

8 nV/√Hz noise, offering high input impedance but higher voltage noise compared to bipolar devices. Design ConsiderationsHigh-speed TIAs are typically implemented with operational amplifiers in a feedback configuration, converting photodiode current into voltage while maintaining low input impedance to preserve linearity. The achievable bandwidth depends on the source capacitance (photodiode and parasitic capacitances), feedback resistor, and the amplifier's GBP.

Bipolar amplifiers generally provide lower input voltage noise, while FET input amplifiers offer higher input impedance but at the cost of increased noise.

Applications

These high-speed TIAs are widely used in: Optical communication systems for fast photodiode signal detectionLiDAR and automotive sensors requiring precise current-to-voltage conversionMedical instrumentation and precision metering where high-speed response is critical Selecting the right TIA involves balancing bandwidth, noise, and input impedance according to the photodiode characteristics and the application's speed requirements.

Transimpedance Amplifiers (TIAs) | Semtech

Our TIAs offer best-in-class performance in limiting, linear or automatic gain control versions for use in high-performance optical receivers operating from 155Mbps to 100Gbps.

Transimpedance Amplifiers » Artifex Engineering

We offer high-quality and powerful transimpedance amplifiers with precise current measurement! Low offset and high linearity!

Transimpedance Amplifiers – Mouser

Transimpedance Amplifiers are available at Mouser Electronics. Mouser offers inventory, pricing, & datasheets for Transimpedance Amplifiers.

LTC6268 Datasheet and Product Info | Analog Devices

The LTC6268/LTC6269 is single/dual 500MHz FET-input operational amplifier with extremely low bias current and low capacitance. It also features low input

MaxLinear Announces Availability of Washington 200G TIA for Next ...

Four-channel, 200G/lane high-speed transimpedance amplifier enables cost-effective, power-efficient, fully retimed PAM4 optical signaling for next-generation 1.6T optical interconnects

Optical Transimpedance Amplifiers Market Report: In-Depth ...

The Optical Transimpedance Amplifiers (TIA) market is poised for significant growth, driven by the increasing demand for high-speed data transmission in telecommunications and data centers.

Semtech Announces 224Gbps TIAs and MZM Drivers for Optical

Semtech, a leading provider of high-performance semiconductor, Internet of Things (IoT) systems and cloud connectivity service solutions, announced a family of 224Gbps per lane

Semtech Data Center Solutions | High-Speed Optical

Optical Interconnects for Hyperscale Performance Semtech''s FiberEdge® and DirectEdge™ platforms offer industry-leading high performance analog Laser

OPA659IDRBR datasheet

The OPA659 combines a very wideband, unity-gain stable, voltage-feedback operational amplifier with a JFET-input stage to offer an ultra-high dynamic range amplifier for high impedance buffering in data
