# Horizontal power distribution box on the dock

## Overview

A shore power pedestal is a weatherproof power station installed on docks to supply electricity to boats while they're docked. These units give boaters access to the same kind of power they'd have at home, allowing them to run appliances, charge batteries, or use onboard HVAC. Whether you own a marina or a private dock, or you're looking for RV power stations, we have the best selection of versatile electrical power pedestal units to meet the needs of both commercial and residential shore power and RV power applications. Our unique designs are functional and attractive. The Admiral SS provides amperage capabilities up to 500 Amps and voltages of 480/277 three-phase, 208/120 three-phase, 120/240 single-phase, and combinations of these receptacles in one unit to serve nearly any size vessel. Extruded marine grade aluminum 6063 with 3/16" wall thickness. No seams. Known as a leader in electrical control, power distribution, and industrial automation products and services, Eaton Corporation consistently provides power management solutions. This guide breaks down what these systems are, the features to look for, and how marina owners can choose the best fit for their layout and customers. Lockable, weather-tight, on the dock storage of boat equipment with an integrated utility station.
