# How thick is the fiberglass cable tray in Spain

## Overview

We offer a wide range of cable tray systems to support tubing, electrical cables and instrumentation.

## Key Takeaways

Fiberglass cable trays (FRP) typically have wall thicknesses ranging from 3 mm to 6 mm, depending on the type, load requirements, and resin system used.

### General Specifications

Fiberglass cable trays in Spain are usually made from fiberglass reinforced polyester (FRP) or vinylester resin, offering high corrosion resistance, lightweight construction, and fire-retardant properties. The thickness of the tray depends on the tray type: Channel-type trays: Often have sidewalls and bottom thicknesses around 3–5 mm, with covers adding an additional 2–3 mm for protection. Ladder-type trays: The rungs and side rails are typically 4–6 mm thick, designed to support heavier cable loads while allowing ventilation and heat dissipation.

### Factors Affecting Thickness

Load capacity: Heavier cable loads require thicker sidewalls and rungs to prevent deflection. Environmental conditions: Outdoor, marine, or chemical plant installations may use thicker trays or vinylester resin for enhanced corrosion and heat resistance. Standards compliance: FRP trays are often designed to meet ASTM E-84 Class 1 flame rating and other local electrical and fire safety standards.

### Installation Considerations

Fiberglass trays are lighter than steel or aluminum, typically 40% lighter than steel, which allows easier handling and installation. Covers can be added to channel trays to protect cables from dust, moisture, or mechanical damage, slightly increasing the overall thickness. Pultruded or pressed FRP trays maintain consistent thickness and strength, ensuring long-term durability in humid, saline, or chemically aggressive environments.

In summary, while exact thicknesses may vary by manufacturer and application, most fiberglass cable trays in Spain fall within 3–6 mm for structural components, with additional thickness for covers or accessories as needed. This ensures a balance between strength, weight, and environmental resistance.

Cable trays

We offer a wide range of cable tray systems to support tubing, electrical cables and instrumentation. Our cable trays are produced in fit for purpose materials like

LEGRAND CABLE TRAYS TECHNICAL GUIDE

Not all cable trays are equivalent. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our

Fiberglass Reinforced Plastic (FRP) Cable Tray

Thickness of FRP side rail for LH Series is 6mm unless otherwise specified. Thickness of FRP side rail for LMH Series is 4.5 mm unless otherwise specified. Thickness of FRP side rail for LM Series is 4.5

Fiberglass channel tray | Polyester cable ladder | Vinyl-ester cable ...

Tested for ABS, NEMA and IEC, B-Line series fiberglass cable tray is ideal for harsh, marine and caustic environments. Learn about its corrosion resistant properties.

Fiberglass Cable Tray Specs: Dimensions & Load Data

Technical specifications for B-Line Series 48 fiberglass cable trays. Includes dimensions, load ratings, and part numbering information.

Basor Electric

Thanks to the recreation of various environments that you can choose at your discretion, it is achieved, in a very simple and intuitive way, to know what type of cable tray is suitable.
