How to apply quotas to smart terminal boxes

Overview

The 'isi quota quotas create –enforced=false' CLI command can be used to create an accounting quota. Alternatively, this can be done from the WebUI by navigating to File System > SmartQuotas > Quotas and usage > Create quota. OneFS includes SmartQuotas, a native data management capability that enables enterprises to reduce storage costs with a simple-to-use, highly scalable, and flexible storage quota and provisioning application for scale-out storage environments. SmartQuotas also enables 'thin provisioning', or the ability to present more storage capacity to applications and. SmartQuotas has four main resources used in quota accounting: This includes all the on-disk storage associated with files and directories, with the exception of some metadata objects including the LIN tree, snapshot tracking files (STFs). For deduplicated data and file clones, each file's 8 KB. Resource quotas are a tool for administrators to address this concern. A resource quota, defined by a ResourceQuota object, provides constraints that limit aggregate resource consumption per namespace.
