# How to create a skylight in a 24-core fiber optic cable

## Overview

You take thin, flexible fiber optic strands (think fishing line that glows), thread them through tiny holes in a ceiling panel, and connect them to an LED light engine hidden above. The engine pushes light through each strand. It looks like a night sky, costs under $75, and takes a weekend afternoon. Paint the ceiling dark, drill random holes, thread strands, leave a tiny bit poking out (not flush). This guide provides a step-by-step guide on creating a fiber optic starfield ceiling using fiber optic cables. Fiber optic star lights are a great way to add a touch of magic and sophistication to any room, and they're especially popular in theaters, planetariums, and other. Our DIY fibre optic lighting kits make creating your own celestial masterpiece easier than ever before.
