How to set up a Huawei router with gigabit fiber optic internet

Overview

Learn about ''How can I set up the Internet for my new HUAWEI router on my computer''. Find all usage guide, troubleshooting tips and resources for your HUAWEI product.

Key Takeaways

Setting up a Huawei router for gigabit fiber involves connecting the fiber line, configuring the router via its web interface, and optionally setting up Wi-Fi and VLAN settings.

Physical Connection

Connect the Fiber Line: Plug the fiber optic cable from your Internet Service Provider (ISP) into the WAN/ONT port of your Huawei router. If your router is a GPON ONT (like Huawei EchoLife HG8145X6 or HG8546M), it will convert the fiber signal to Ethernet automatically. Connect Your Devices: Use an Ethernet cable to connect your computer to a LAN port on the router, or connect wirelessly to the default Wi-Fi network (SSID and password are on the router label),.

Power On: Connect the router to a power source and wait for it to initialize.

Router Configuration

Access the Web Interface: Open a browser and enter the router's default IP address (usually printed on the router label) to access the web-based management page. Internet Setup Wizard: Click Get Started and follow the wizard. The router will attempt to detect your Internet access mode automatically.

If it cannot, select DHCP or enter your ISP-provided Broadband account, password, IP address, subnet mask, gateway, and DNS servers.

VLA

N Configuration: If your ISP requires VLAN tagging, enable VLAN in the Internet connection settings and enter the VLAN ID provided by your ISP.

Wi-

Fi and SecurityCreate Wi-Fi Network: Set a new Wi-Fi name (SSID) and password for your network. Router Login Password: Change the default admin password to secure the web interface. Advanced OptionsBridge/Pass-Through Mode: If you want to use a separate router for advanced features, connect it to the Huawei router's dedicated LAN port (often port #4) and disable DHCP on the Huawei router.

This allows your secondary router to receive the public IP address and manage the network. Extending Fiber to Another Location: For relocating the router or extending fiber to a cabinet, use a fiber patchcord, adapter, and enclosure. Ensure you identify the fiber type (usually single-mode) and consult your ISP before making changes.

Device Connections

Wired Devices: Connect PCs, set-top boxes, or switches to the LAN ports. Wireless Devices: Connect phones, tablets, and laptops to the configured Wi-Fi network. Following these steps ensures your Huawei router is properly set up for gigabit fiber optic internet, with secure Wi-Fi and optional advanced configurations like VLAN or bridge mode.
