Huijue Fiber Optic Cable Disconnection Status

Overview

TeleGeography''s comprehensive and regularly updated interactive map of the world''s major submarine cable systems and landing stations.

Key Takeaways

There is no publicly reported disconnection for the Huijue Fiber Optic Cable as of May 15, 2026, but intermittent link issues can occur due to optical power jitter or transmission faults.

Current Status Monitoring

The Huijue Fiber Optic Cable's operational status can be monitored through submarine cable maps and global outage platforms. TeleGeography's interactive submarine cable map provides real-time information on the status of major undersea cables and landing stations, showing whether a system is in service or experiencing disruptions. Additionally, platforms like ThousandEyes track Internet outages globally, including ISP and backbone network disruptions, which can help detect if the Huijue cable is affecting traffic.

Causes of Intermittent Disconnections

© 2026 FD SOLUCIONES OPTICAL SYSTEMS - All rights reserved

Even when a cable is operational, intermittent disconnections may occur due to technical factors on the transmission side. For example, fast optical power jitter can prevent the optical module from quickly tracing and restoring data and clock signals, causing the port on downstream switches to go down temporarily. Network devices often implement a port down delay (e.g., 200 ms) to prevent service interruptions caused by such transient link quality issues.

These events are usually short-lived and do not indicate a full cable outage.

Global Context

While there are no reports of a Huijue-specific outage, subsea cables in strategic regions, such as the Red Sea, have experienced simultaneous cuts in the past, leading to rerouted traffic, increased latency, and congestion. Such incidents highlight the importance of monitoring and rerouting capabilities for maintaining network stability.

Recommendations

Check submarine cable maps for the latest operational status of Huijue and other regional cables. Use Internet outage monitoring tools like ThousandEyes to detect any service impact on your network. For network operators, configure port down delays on interfaces connected to optical links to mitigate intermittent disconnections.

In summary, as of the current date, the Huijue Fiber Optic Cable is not reported as disconnected, but intermittent link issues can occur due to optical transmission factors. Continuous monitoring and proper network configuration help minimize service impact.

On 17–18 November 2024, two submarine telecommunication cables, the BCS East-West Interlink and C-Lion1 fibre-optic cables, were disrupted in the Baltic Sea. The incidents involving both cables occurred in close proximity to each other and near-simultaneously, which prompted accusations from European government officials and NATO member states of hybrid warfare and sabotage as the cause of the damage. Currently, the damage to those undersea cables has not been conclusively attributed to any specific p

huijue-optical-cable-manufacturer-supply-status

We are your specialist for fiber optic cables and custom cable assemblies. With us, you will receive ready-to-connect fiber optic cables in any required configuration, with all connector types and...

How to tell the quality of Huijue fiber optic cables

Learn how to verify fiber optic cables with expert testing methods. Discover quality assurance techniques, inspection procedures, and best practices for reliable fiber networks.

Research on Submarine Cable Condition Monitoring Technology

Considering the wide application of submarine cables in the future, it is necessary to use the optical fiber in submarine cables to carry out research on new technologies for submarine cable operational

VisiFault Visual Fault Locator

The laser-powered VisiFault Visual Fault Locator is a cable continuity tester that locates fibers, verifies cable continuity and polarity. This cable continuity tester helps find breaks in cables, connectors and

Huijue Fiber Optic Patch Cord Technical Parameters

DESCRIPTIONS Fiber optic patch cord is also called fiber optic connector. It is dismountable, flexible and featured with small size, low insertion loss and lower price.

International Cable Breaks in Red Sea Cause Latency Surge Across

You may experience some slowness in our data services due to an international submarine cable cut. Our technical teams are working to resolve the issue. Both companies assured

Fibernet Live Service Outage Map

View Fibernet service outage reports and status updates on an interactive world map. Monitor service availability and incidents globally.

Fiber Optic Cable
