

Installation price of distribution box and surge protection box

Overview

Key cost drivers include panel amperage, indoor vs outdoor location, wiring length, and whether a full panel upgrade or rerouting is needed.

Key Takeaways

Installing surge protection in a distribution box typically costs between \$200 and \$2,500, depending on device type, installation complexity, and panel requirements.

Cost Breakdown

Device Type: Point-of-use surge protectors (outlet-level) are the least expensive, generally ranging from \$95 to \$500 for residential applications, depending on joule rating and number of outlets. Whole-home or panel-mounted surge protectors installed in a distribution box typically cost \$300 to \$1,200 for standard units, with high-end or multi-circuit systems reaching \$2,500 or more. Installation Costs: Labor is a significant factor, especially if the installation requires panel upgrades, rewiring, or permits.

Simple installations on newer panels are less expensive, while older or complex panels increase labor costs. Typical labor rates vary by region but can add \$100 to \$500 to the total project cost. Additional Factors: Amperage rating and number of circuits served by the distribution box can affect pricing.

Quality and brand of the surge protector influence cost; certified, high-performance devices are more expensive but offer better reliability. Outdoor or weather-resistant enclosures may carry a premium if the distribution box is exposed to environmental conditions.

Summary

For a standard residential installation: Basic point-of-use protection: \$95–\$500 Panel-mounted surge protection in a distribution box: \$300–\$1,200 High-end or multi-circuit whole-home systems: \$1,200–\$2,500 For commercial or industrial applications, costs can be higher due to larger capacity, three-phase systems, and advanced monitoring features. Choosing a professional installer ensures proper integration, compliance with electrical codes, and reliable protection for sensitive equipment.
