Installation price of electrical distribution boxes in electrical box sheds

Overview

Cost to Add Electricity to a Shed: Pricing Guidebuyers typically pay a range for adding electrical service to a shed, driven by distance from the main pane.

Key Takeaways

Installing an electrical distribution box in a shed typically costs between $350 and $1,500, depending on box type, capacity, and installation complexity.

Material Costs

The cost of the distribution box itself varies widely based on specifications: Basic residential single-phase boxes: $70–$450 for weatherproof or metal units suitable for outdoor sheds. Commercial or high-capacity three-phase boxes: $500–$1,200 or more, especially if they include advanced features like smart monitoring or digital displays. Panel boxes/subpanels: $150–$1,900 including breakers and wiring, with most residential shed installations falling between $450–$1,500.

Plastic boxes are the most affordable, while metal or weatherproof boxes for outdoor sheds command higher prices due to durability and environmental protection.

Labor and Installation Costs

Labor is a significant portion of the total cost: Electrician hourly rates: $50–$100+, depending on region and experience. Installation time: Typically 0. 5–3 hours per box, depending on complexity, access, and whether the shed requires trenching or conduit runs.

Additional work: Trenching, wiring, and mounting can add several hundred dollars, especially for outdoor sheds or long-distance runs from the main power source. For a standard shed installation with a weatherproof distribution box, expect total installation costs (materials + labor) around $350–$560 for a single box, while larger or more complex setups can reach $1,000–$1,500.

Factors Affecting Price

Box Type and Material: Plastic vs. metal, indoor vs. outdoor, weatherproof rating. Amperage and Circuit Capacity: Higher amp ratings and more circuits increase cost. Installation Complexity: Trenching, conduit routing, and distance from main power source.

Additional Features: AFCI/GFCI protection, smart monitoring, or integration with building management systems. Local Labor Rates and Permits: Regional differences in electrician fees and permit requirements can significantly affect total cost.

Summary

For a typical shed, budget $350–$560 for a basic weatherproof distribution box installation and $1,000–$1,500 for larger, high-capacity, or feature-rich setups. Always obtain multiple quotes from licensed electricians to ensure compliance with local codes and accurate cost estimates.
