Is the pigtail FC head round or square

Overview

The fiber optic pigtail is a short length of optical fiber that is terminated with a connector at one end and spliced to the end of a fiber optic cable at the other end.

Key Takeaways

The FC connector on a fiber optic pigtail has a round head.

Connector Shape and Design

The F

C (Ferrule Connector) series is designed with a cylindrical, round metal body that screws into the mating adapter for a secure connection.

Unlike S

C connectors, which have a rectangular or square housing, the FC connector uses a threaded round ferrule to ensure precise alignment and low insertion loss, making it ideal for single-mode fiber applications where stability and vibration resistance are important.

Key Features of FC Pigtails

Polish Types: Available in UPC (Ultra Physical Contact) and APC (Angled Physical Contact) versions. Cable Diameter: Typically 0. 9mm tight-buffered fiber.

Applications: Commonly used in telecommunications, data centers, and optical distribution frames where a secure, permanent connection is required. Color Coding: Yellow for single-mode, orange for multimode, and aqua for OM3/OM4 fibers. Comparison with Other ConnectorsSC Connector: Square or rectangular head, push-pull design.

S

T Connector: Round body with bayonet twist-lock.

L

C Connector: Small form factor, rectangular head. The round, threaded design of the FC connector provides mechanical stability and precise fiber alignment, which is why it is preferred in environments where vibration or movement could affect signal quality.

What is a Fiber Optic Pigtail?

The fiber optic pigtail is a short length of optical fiber that is terminated with a connector at one end and spliced to the end of a fiber optic cable at the other end.

Fiber Optic Pigtails: Uses & Differences from Patch Cords

A fiber optic pigtail is a short length of optical fiber —typically 0.5m to 2m—that has a factory-terminated connector on one end and bare fiber on the other end.

Fiber pigtail knowledge

One end of it has a connecting head, and the other end is a broken end of a fiber optic cable core, which is welded with other fiber optic cable core to complete the connection.
