Is working in a power grid relay protection team dangerous

Overview

Substation relay technicians, who work in these environments, must understand and comply with stringent safety standards to protect themselves and their colleagues. The foundation of safety in such settings lies in comprehensive training and the consistent application of. As for the danger of the job, it's the least risky of the jobs in my specific work environment. Control voltage is usually 125vdc and there are of course current and voltage from the yard transformers but they're usually no more than 70vac and 10amps by the time they make it to the control house in. Relay systems are the backbone of grid safety, protecting electrical networks from potentially catastrophic failures. As a P&C engineer, you're going to be around control or medium voltage. It's more. Grid stations are vital nodes in electricity distribution, managing high-voltage power conversion and routing.
