Network Rack Configuration List and Prices

Overview

This in-depth guide will give you a 360-degree view of the considerations, pitfalls, and strategies for choosing and deploying the ideal network rack for your business.

Key Takeaways

Network rack design costs vary widely, ranging from $200 for basic wall-mounted racks to $50,000+ for fully equipped enterprise setups, with installation, power, cooling, and colocation fees significantly affecting total expenses. Rack Hardware CostsEntry-level racks (small wall-mounted units) typically cost $200–$600 in the U. S., suitable for small offices or network closets.

Floor-standing racks for larger IT environments range from $800–$3,000+, offering higher capacity and scalability. High-end enterprise racks with advanced features, cooling, and accessories can cost $2,000–$5,000 or more, with fully equipped setups (including servers, storage, and networking equipment) reaching $15,000–$50,000+.

Installation and Labor Costs

Standard rack installation ranges from $500–$2,000 per rack, while high-density or custom modular systems can cost $2,500–$6,000 per rack. Labor for rack and stack installation typically runs $50–$200 per hour, with medium-sized data center setups costing $5,000–$20,000 in labor alone. Power, Cooling, and Cable ManagementPower Distribution Units (PDUs): $200–$1,500 per unit; UPS systems: $1,000–$10,000 each.

Cooling systems (airflow management, liquid cooling) range from $500–$5,000 per rack. Cable management: basic systems $200–$1,000; advanced rack-mounted systems $1,000–$3,000 per rack.

Colocation and Data Center Rack Costs

Full racks (42U, 3–5 kW) in Tier III facilities typically cost $900–$2,500/month, with high-density racks (10–30+ kW) exceeding $3,000–$6,000+/month. Half racks usually start at $400–$600/month, including basic power and shared cooling. Private cages or dedicated suites can range from $2,000–$50,000+ per month, depending on size, power, cooling, and included services.

Additional costs may include cross-connects, IP addresses, remote hands, and one-time setup fees ($100–$500) for network connectivity. Total Estimated Costs by Deployment SizeSmall data center (10–20 racks): $50,000–$100,000 total setup. Medium data center (50–100 racks): $200,000–$500,000.

Large enterprise (200+ racks): $1,000,000+.

Key Considerations

Location significantly affects pricing; major metro areas command higher rates. Power density and cooling requirements can dramatically increase costs. Future scalability should be factored in when selecting rack size and type.

Colocation contracts often include hidden line items such as bandwidth, remote hands, and service fees, which can double the apparent monthly cost. By understanding these components, businesses can budget accurately for network rack design, whether for in-house data centers or colocation facilities.
