New waterproof splice box from Indonesia directly supplied by the manufacturer

Overview

This box provides a comprehensive solution by integrating fiber splicing, splitting, distribution, and storage within a single durable enclosure.

Key Takeaways

IP68-rated waterproof splice boxes from Indonesia are available directly from manufacturers, offering high durability, corrosion resistance, and up to 96-fiber capacity for outdoor and underground installations.

Key Features

Waterproof and Dustproof: Rated IP68, these enclosures are completely dust-tight and can withstand continuous immersion in water, making them suitable for extreme outdoor conditions, direct burial, aerial, or pipeline installations (Duta Sukses Indonesia). Material and Durability: Constructed from reinforced plastic or polypropylene with flame-retardant properties, these boxes resist corrosion, vibration, impacts, and temperature extremes from -30°C to 100°C (DirectIndustry). Fiber Capacity: Standard models can accommodate up to 96 fiber cores using modular splice trays, with options for smaller or larger capacities depending on network requirements (Duta Sukses Indonesia).

Sealing and Protection: High-quality gaskets, silicone seals, and resin compounds ensure zero moisture ingress, protecting optical splices and copper conductors from environmental damage (Sendang Berlian Sejahtera). Installation Flexibility: Suitable for overhead mounting, wall or pole installation, underground burial, and pipeline applications. Accessories include U-shape connectors, metal bases, and mounting brackets for easy deployment (Duta Sukses Indonesia).

Compliance and Safety: Many Indonesian manufacturers adhere to international standards such as DIN EN 50393 for electrical joints and IP68 certification for waterproofing, ensuring reliability in telecom, power, and signal applications (DirectIndustry).

Manufacturer Options in Indonesia

Duta Sukses Indonesia: Offers IP68 fiber optic splice enclosures with up to 96-core capacity, reinforced plastic construction, and complete accessory kits for installation (Duta Sukses Indonesia). PT. Sendang Berlian Sejahtera: Specializes in resin-sealed splice kits for copper and LV cables, suitable for pipelines, tanks, and buried structures, with high moisture resistance and mechanical strength (Sendang Berlian Sejahtera).

Practical Considerations

When sourcing directly from Indonesian manufacturers, consider: Capacity Needs: Choose a model that matches your fiber count or cable size. Environmental Conditions: Ensure the IP68 rating and material are suitable for your installation environment. Accessories and Installation: Verify that mounting brackets, gaskets, and sealing kits are included.

Compliance: Confirm adherence to international standards for safety and performance. These waterproof splice boxes provide a reliable, durable, and manufacturer-direct solution for telecom, industrial, and power network installations in challenging environments.
