No internet after fiber optic cable is installed and router is installed

Overview

First, check the physical connection between the fiber equipment and the router. Your fiber service usually comes into your home through a small device called an ONT (Optical Network Terminal) or fiber modem. This device converts the fiber signal into an Ethernet. Have you noticed if any cables or connectors are loose or not fully plugged in on your modem or router?

Customer: no wan connection yes did Technician's Assistant: Thanks for confirming that you've checked the cables and saw a "no WAN connection" message. Have you tried restarting your modem or. Lan showing disconnected on fiber box; try reconnecting lan cable or power cycle router Is it still connected to the copper phone line?

Unplug that if it is and make sure in the router the wan port is turned on. I'd do what others have recommended. When issues like signal loss, slow speeds, or intermittent connectivity arise, systematic troubleshooting is key. Why Do Fiber Networks Fail?

Despite their robustness, fiber networks can fail due to:. Your fiber optical network terminal (ONT), modem, or gateway provides LEDs letting you know the status of your internet (wide area network, or WAN) and home network (local area network, or LAN) connections. Here's an example of LEDs to look for if you have fiber internet and an ONT: The Power LED. Every network is different, but all have a broadband terminal device — likely a cable modem or a fiber-optic ONT — and a router.
