Nordic Ladder Cable Tray Specifications

Overview

Our Range of Cable Trays and Accessories | Nordic Wire TrayOur team of experts can help you choose the right cable ladder to suit your application and inst.

Key Takeaways

Nordic Ladder Cable Trays are robust cable support systems designed for high load capacities, wide spans, and harsh environmental conditions, typically made from galvanized or stainless steel with optional protective coatings.

Material and Construction

Nordic Ladder Cable Trays are generally manufactured from galvanized steel, stainless steel, or acid-proof steel, providing durability for both indoor and outdoor applications, including industrial environments such as pulp and paper, wood, and food industries (Meka). Some models feature tube side profiles to protect against dust, dirt, and humidity, enhancing longevity in challenging conditions. Fiberglass-reinforced options are also available, offering UV resistance, chemical protection, and fire retardancy with Class 1 flame spread ratings per ASTM E-84.

Dimensions and Load Capacity

Typical ladder tray dimensions include heights ranging from 50mm to 120mm, with widths and rung spacing customizable based on cable load requirements. Load capacity is defined by the Safe Working Load (SWL), which depends on the span between supports. For fiberglass trays, the load vs. span is calculated based on maximum deflection at mid-span, and continuous spans may allow higher load ratings.

Steel ladder trays are often rated by Load Class, which determines the maximum supported weight for a given support span.

Installation and Fittings

Nordic Ladder Cable Trays are modular and can be mounted on floors, walls, ceilings, or equipment racks. Standard fittings include elbows, tees, vertical risers, reducers, cover clips, and joint connectors, allowing flexible routing of cables along complex paths. Open or perforated designs improve ventilation, reducing the risk of overheating for power and communication cables.

Standards and Compliance

These cable trays typically comply with IEC 61537 for cable tray systems, ensuring international standardization for material, fabrication, and load-bearing performance. Fiberglass trays may also meet ABS rules for marine installations, providing conductive properties for static dissipation when required.

Summary

Nordic Ladder Cable Trays are engineered for high durability, flexible installation, and reliable cable support in demanding environments. Key specifications include: Materials: Galvanized steel, stainless steel, acid-proof steel, or fiberglass-reinforced compositesHeights: 50mm to 120mm (customizable)Load Capacity: Defined by SWL and Load Class, dependent on spanFittings: Elbows, tees, risers, reducers, covers, joint connectorsCompliance: IEC 61537, ASTM E-84 Class 1, ABS rules for marine applicationsEnvironmental Suitability: Indoor, outdoor, corrosive, or UV-exposed areas These features make Nordic Ladder Cable Trays suitable for industrial, commercial, and marine installations requiring robust, modular, and safe cable management solutions.
