Offshore Price Active Optical Module PAM4

Overview

This report analyses the market for semiconductor IC chipsets used in optical transceivers, active cables, and related products.

Key Takeaways

The offshore price of PAM4 active optical modules varies widely by bandwidth, form factor, and supplier, typically ranging from several hundred to several thousand USD per module, with higher-speed modules (400G–1. 6T) commanding premium prices. Pricing OverviewPAM4 active optical modules (AOMs) are used in high-speed data center, AI, and telecom networks, supporting 100G, 200G, 400G, 800G, and 1.

6T transmission rates. Prices depend on several factors: Bandwidth and Form Factor: QSFP28 100G PAM4 modules are generally the most cost-effective, while QSFP-DD or OSFP modules for 400G–1. 6T are significantly more expensive due to higher complexity and DSP requirements.

DSP and I

C Components: Modules using advanced PAM4 DSPs from Marvell, Credo, or other vendors include high-performance silicon for low-latency, high-bandwidth operation, which increases cost. Distance and Reach: Short-reach modules (SR) are cheaper than long-reach (LR) or DWDM-enabled modules, which require precise laser tuning and additional optical components. Market Dynamics: Global demand for AI, cloud, and 5G infrastructure drives pricing.

According to Light

Counting, PAM4 and coherent DSP ICs have seen strong growth from 2019–2024, with continued expansion forecasted through 2030, influencing module prices. Typical Offshore Price Ranges (Estimates)100G PAM4 QSFP28: $300–$600 per module offshore, depending on reach and vendor. 200G–400G PAM4 QSFP-DD: $800–$1,500 per module, with short-reach versions at the lower end.

800G PAM4 OSFP/QSFP-DD: $2,000–$4,000 per module, often used in hyperscale data centers. 1. 6T PAM4 modules: $5,000+ per module, reflecting cutting-edge DSP technology and high lane counts.

Key Considerations for Offshore Procurement

Supplier Selection: Leading vendors include Marvell, Credo, and FS, each offering modules optimized for Ethernet, InfiniBand, or AI workloads. Module Type: Active optical cables (AOCs) may offer cost savings for short distances compared to pluggable transceivers with separate fiber. Volume Discounts: Large-scale purchases for data centers or telecom operators can reduce per-unit cost.

Shipping and Customs: Offshore pricing may vary due to import duties, logistics, and regional supply chain constraints.

Conclusion

The offshore price of PAM4 active optical modules is highly variable, influenced by speed, reach, form factor, and vendor. For budgeting purposes, 100G modules start around a few hundred USD, while cutting-edge 1. 6T modules can exceed $5,000 per unit.

Market trends indicate continued demand growth, particularly for AI and hyperscale cloud networks, which may sustain premium pricing for high-speed PAM4 modules.
