Optical distribution box fiber optic panel

Overview

This optical fiber distribution box integrates essential functions—splicing, splitting, storage, distribution, and routing—into one wall-mountable unit. Its modular, user-friendly design simplifies network expansion while delivering superior durability and long-term reliability. As an important node in fiber optic access networks (such as FTTH) and backbone networks, it ensures efficient transmission. Fiber distribution box is suitable for the wiring connection of optical cable and optical communication equipment, through the adapter in the wiring box, the optical jumper leads the optical signal, and realizes the optical wiring function. OTRANS strives to provide you with professional, reliable. ODF is used in the terminal access link of FTTH system. It is a device that splices, distributes, and splits optical fibers and provides protection and management of optical fibers. Indoor and outdoor distribution boxes for FTTH/FTTB — 8 to 96 cores, pre-terminated or splice-ready. A fiber optic distribution box — also known as an FDB or NAP (Network Access Point) — is a mid-span enclosure that distributes fibers from a feeder cable to individual drop cables serving.
