Original Authentic Anti-Signal Long-Distance Optical Transceiver

Overview

The OTR 1810 is a Fiber / SDI transmitter and receiver combined in a single self contained package. It is a convenient and cost effective solution to combat the restrictions involved with the distribution of uncompressed broadcast quality video signals over long distances. Moog Protokraft designs and manufactures miniaturized, lightweight electro optical converters for use in harsh environments such as military, avionics and other rugged industrial applications. Optical transceivers have enabled the development of high-speed networks, such as 10 Gigabit Ethernet, 40 Gigabit Ethernet, 100 Gigabit Ethernet, and beyond. The equipment has built-in signal equalization. Optical transceivers are critical components in modern communication infrastructure, enabling the high-speed transmission of data across optical fiber networks.
