PS cable distribution box

Overview

Each Pac Drive iSH has a Pac- Drive PS-5 that can be quickly installed with a single connection line. Which means that the PS-5 fits seamlessly into the extremely flexible, modular drive concept.

Key Takeaways

A PS cable distribution box can refer to either the PacDrive PS-5 industrial power supply and distribution box or the PS-5 fibre optic distribution box for telecommunications, each designed for organized cable management and connectivity.

Pac

Drive PS-5 and DB-5 Distribution BoxThe PacDrive PS-5 is a compact power supply unit designed for switching cabinet installation in industrial automation systems. It integrates seamlessly with the modular PacDrive drive concept, providing power to connected iSH devices. The DB-5 distribution box works alongside the PS-5 to manage connections, including SERCOS bus communication and DC bus voltage distribution.

Key features include: Single connection line installation for quick setupLED indicators for SERCOS bus status and device errorsRotary switches for SERCOS address configurationDIL switches to adjust fiber-optic transmitter intensitySafety measures for handling dangerous DC bus voltageDiagnostic support via the EPAS-4 Automation Toolkit for troubleshooting hardware errors and monitoring system performance This setup is primarily used in industrial machinery and motion control systems, ensuring reliable power distribution and communication between modular drive components. PS-5 Fibre Optic Distribution BoxThe PS-5 fibre optic distribution box is designed for telecommunications and optical networks, typically wall-mounted in controlled environments.

Its main functions include: Termination of up to 24 optical fibresFour cable entry points for organized routingStorage of uncut fibre loops to prevent damageCompact design suitable for indoor installations This type of distribution box is used to manage fibre optic connections efficiently, providing protection and easy access for maintenance or network expansion.

Summary

Industrial Automation Context: PS-5 (PacDrive) + DB-5 distribution box for power and SERCOS bus management in machinery. Telecommunications Context: PS-5 fibre optic distribution box for terminating and organizing optical fibres in network installations. Choosing the correct PS distribution box depends on whether the application involves industrial power distribution or fibre optic network management.

Both types are designed to ensure organized, safe, and reliable cable handling.
