PVC cable tray trough

Overview

PVC Cable Tray Find here PVC Cable Tray, Polyvinyl Chloride Cable Tray manufacturers, suppliers & exporters in India. Get contact details & address of comp.

Key Takeaways

Yes, a PVC cable trough is considered a type of cable tray, specifically a trough-style cable tray designed to support and protect cables.

Definition and Classification

A cable tray is a rigid structural system used to securely support and organize electrical, control, and communication cables. It consists of straight sections, fittings, and accessories that form a continuous pathway for cables, providing protection, accessibility, and ease of maintenance. According to the National Electrical Code, cable trays include various designs such as ladder trays, ventilated trays, solid-bottom trays, and troughs.

A trough cable tray is a specific type of cable tray that features a continuous or partially ventilated bottom with solid side rails, forming a shallow “U”-shaped channel. Unlike ladder trays, troughs do not have transverse rungs, but they provide continuous support for cables and moderate structural strength. They are commonly used for control, instrumentation, and communication cables, offering protection from dust, debris, and electromagnetic interference.

PV

C as a MaterialCable trays, including troughs, can be manufactured from various materials such as steel, aluminum, stainless steel, and PVC.

PV

C troughs are lightweight, corrosion-resistant, and suitable for environments where chemical exposure or moisture is a concern. They function identically to metal trough trays in terms of cable support and organization, though they may have different load capacities and thermal characteristics. ApplicationsPVC cable troughs are widely used in industrial, commercial, and data center installations where moderate protection and cable organization are required.

They are particularly effective for low-voltage, control, and communication cables, and can be fitted with covers for additional protection.

Conclusion

In summary, a PVC cable trough is indeed a cable tray, classified under the trough-style design. It provides a structured pathway for cables, supports them securely, and can be used in various environments, making it functionally equivalent to other cable tray types while offering the benefits of PVC material.
