Key Takeaways

Power over Ethernet (PoE) switches provide power and data over a single cable, simplifying network installations and reducing the need for additional power sources.

E Switch SpecificationsModels Available: 8, 16, 24, or 48 PoE Gigabit Ethernet ports. Power Standards: Supports IEEE 802. 3af/at and configurable 24V passive PoE.

Power Output: Automatically detects and supplies power to compatible devices. For 802. 3af/at devices, it provides up to 30 watts per port.

The total power budget varies by model, allowing for multiple devices to be powered simultaneously. Uplink Options: Each model includes two SFP ports for uplinks of up to 1 Gbps, with 48-port models adding two SFP+ ports for 10 Gbps uplinks. Management: Managed via UniFi Controller software, allowing for configuration and monitoring of the switch and other UniFi devices.

Link DGS-1008P SpecificationsPorts: 8 Gigabit Ethernet ports, with 4 ports supporting PoE. Power Output: Each PoE port can supply between 15 and 30 watts, with a total power budget of 60 watts for all PoE ports combined. Installation: Plug-and-play installation with no additional configuration required.

It features auto-MDI/MDI-X support and energy-efficient technologies to reduce power consumption during low network utilization. Use Cases: Ideal for connecting PoE devices like wireless access points, IP cameras, and VoIP phones without needing separate power supplies. These specifications highlight the capabilities of popular PoE switches, making them suitable for various networking needs, especially in environments where power outlets are limited.
