Polish Enterprise-Grade Optical Router PAM4

Overview

The Marvell® PAM4 optical DSP portfolio addresses the critical the need for high-bandwidth optical interconnects to power AI infrastructure.

Key Takeaways

Enterprise-grade optical routers leveraging PAM4 modulation enable 100G to 400G+ high-speed connectivity for AI, cloud, and data center networks. Overview of PAM4 Optical TechnologyPAM4 (Pulse Amplitude Modulation with 4 levels) is a high-speed modulation scheme that encodes two bits per symbol, effectively doubling the data rate compared to traditional NRZ (Non-Return-to-Zero) signaling. This allows optical routers and transceivers to achieve 100G, 400G, and beyond within the same bandwidth, making it ideal for enterprise and hyperscale data center networks.

PAM4 is particularly suited for short-reach, high-density interconnects in metro, campus, and AI infrastructure deployments. Key Components in PAM4 Optical RoutersOptical Transceivers (QSFP28, QSFP-DD, OSFP)QSFP28 modules support up to 100 Gb/s per port, with four lanes of 28 Gb/s each. By integrating PAM4 and DWDM (Dense Wavelength Division Multiplexing), these modules can extend 100G and 400G links efficiently.

Higher-speed modules, such as 400G PAM4 transceivers, are interoperable and optimized for AI and cloud infrastructure, supporting scale-up and scale-out deployments. Digital Signal Processors (DSPs)DSPs like Marvell's Spica™, Nova™, and Perseus families enable high-bandwidth optical interconnects for AI, cloud, and enterprise networks. They provide low-latency, high-performance signal processing, supporting Ethernet and InfiniBand architectures at 100G, 200G, 400G, 800G, and 1.

6T speeds.

DS

Ps handle signal equalization, error correction, and PAM4 encoding/decoding, ensuring reliable operation over short and medium distances.

High-

Speed Modulator Drivers

Companies like MACOM provide 448G per lane PAM4 drivers for Mach-Zehnder and EML modulators, enabling 400G+ per lane transmission. These drivers offer high RF bandwidth, linearity, and low power consumption, critical for next-generation optical routers.

Advantages for Enterprise Networks

High Throughput: PAM4 doubles data rates without increasing bandwidth, supporting 400G and 800G links. Scalability: Compatible with AI, ML, and HPC workloads, allowing rapid network expansion. Energy Efficiency: Advanced DSPs and drivers reduce power consumption per bit, critical for dense data center deployments.

Interoperability: Modules and DSPs adhere to IEEE 802. 3 and 400G Optical MSA standards, ensuring compatibility across vendors. Compact Form Factor: QSFP28 and QSFP-DD modules allow high port density in enterprise routers and switches.

Applications

Data Centers: High-speed interconnects for cloud and AI workloads. Enterprise Networks: Metro and campus networks requiring 100G–400G links. AI/ML Infrastructure: Low-latency, high-bandwidth connections for training and inference clusters.

Carrier Networks: Dense wavelength multiplexing for long-haul and short-haul optical links.

Conclusion

Polish enterprise-grade optical routers equipped with PAM4-enabled transceivers, DSPs, and high-speed drivers provide a robust solution for modern high-capacity networks. By leveraging PAM4 modulation, these routers can efficiently support 100G to 400G+ links, ensuring scalability, energy efficiency, and interoperability for AI, cloud, and enterprise applications.

Wholesale Price PAM4 Optical Router

Sailing Poland Optoelectronic Systems (SPO) supplies fiber optic infrastructure: optical transceivers, PLC splitters, ODF racks, patch cords, FTTH cabling, optical switches, and 5G fronthaul solutions for

800G Optical Module PAM4 RoHS

Sailing Poland Optoelectronic Systems (SPO) supplies fiber optic infrastructure: optical transceivers, PLC splitters, ODF racks, patch cords, FTTH cabling, optical switches, and 5G fronthaul solutions for

QSFP28 PAM4 DWDM: High-Capacity 100G/400G Optical

By combining four-level pulse amplitude modulation (PAM4) with dense wavelength division multiplexing (DWDM) technology, these transceivers enable high-capacity, long-reach

PAM4 Optical DSPs | Enabling high-bandwidth optical

The Marvell® PAM4 optical DSP portfolio addresses the critical the need for high-bandwidth optical interconnects to power AI infrastructure. Marvell leads the

50G PAM4 Technical White Paper

The 50GE PAM4 optical module uses the QSFP28 encapsulation mode, LC optical interfaces, and single-mode optical fibers. The transmission distance is 10/40 km, and the maximum power

QSFP28 PAM4 DWDM: How to Extend 100G/400G Links Without

Learn how QSFP28 PAM4 DWDM technology can extend 100G/400G network links without performance loss. Discover practical strategies, deployment tips, and key considerations for

PAM4 Modulation | How is Transforming Optical Networking?

In this blog, we take a higher-level look at PAM4, the modulation scheme that makes short distance 400G networking possible, and discuss how this technology has enabled big leaps in optical

224 Gbps-PAM4 High-Speed Data Center Technology

Built for 224 Gbps-PAM4, these robust cables offer superior mechanical durability and excellent shielding to minimize crosstalk and deliver better signal integrity

PAM4 Optical Modulation: Meeting the Demands of Increasing

© 2026 FD SOLUCIONES OPTICAL SYSTEMS - All rights reserved

PAM4 is an optical modulation technique that allows for higher data rates and increased spectral efficiency compared to NRZ. In PAM4, each symbol represents multiple bits of information

Understanding PAM4 Signaling: A Beginner Guide

PAM4, which plays an essential part in multi-order modulation, is widely utilized in the interconnection of high-speed signals. PAM4 doubles the
