Price of copper sheets for distribution boxes

Overview

The copper coil strip or sheet for distribution boxes is used to install the copper between the box and the wall.

Key Takeaways

Copper sheets for distribution boxes typically range from $4 to $12 per kilogram, depending on purity, thickness, and order volume. Copper sheets used in distribution boxes, often as bus bars or coil strips, are made from high-conductivity pure copper or copper alloys and are valued for their electrical and thermal conductivity, corrosion resistance, and formability. The price varies based on several factors: 1.

Purity and Grade: Standard industrial copper (C11000) is priced around $4–$8 per kg for bulk orders. Ultra-pure copper (99. 99%) can cost $5–$12 per kg, with small retail orders sometimes reaching $40–$50 per pound due to handling and cutting costs.

2. Thickness and Dimensions: Thin sheets (0. 2–1 mm) or custom-cut strips for distribution boxes may carry a premium due to processing and logistics.

Thicker sheets (e.g., 5 mm) suitable for bus bars are generally priced $5–$8 per kg in industrial quantities. 3. Regional and Market Factors: Prices are influenced by global copper benchmarks like the London Metal Exchange (LME), fabrication costs, tariffs, and shipping.

In Asia, bulk FOB pricing ranges from $5–$12 per kg, while North America and Europe may see slightly higher prices due to additional processing and transport costs. 4. Application Considerations: Copper sheets for distribution boxes are often coated or covered with plastic for protection, which may slightly increase the final cost.

Selection depends on system size, electrical load, and environmental conditions, which can affect the required thickness and grade. Summary: For industrial procurement of copper sheets for distribution boxes, expect $4–$12 per kg, with higher prices for ultra-pure, thin, or custom-cut sheets. Small retail or hobbyist purchases can be significantly more expensive.

Buyers should consider purity, thickness, and supplier location to optimize cost and performance.
