## Overview

Level 1 temporary distribution boxes are portable electrical enclosures designed to provide safe, temporary power distribution for construction sites, events, or industrial applications. They usually include circuit breakers, GFCI protection, and multiple outlets to accommodate various equipment and devices. These units are built for durability, often using flame-retardant PC/ABS or cold-rolled steel with IP54–IP65 ratings for dust and water resistance.

Typical PricingEntry-level units (basic 20–50A, 125/250V, 4–6 outlets) are generally priced around $300–$600 per unit. Mid-range units with higher amperage (50A–100A), multiple twist-lock outlets, and enhanced safety features can cost $600–$1,000. Custom or industrial-grade units with expanded circuit capacity, OEM options, or specialized enclosures may exceed $1,200 depending on specifications and order volume.

### Key Features Affecting Price

Amperage and Voltage Rating – Higher capacity units cost more. Number and Type of Outlets – Twist-lock, GFCI, and combination outlets increase cost. Material and Durability – Steel enclosures with powder coating or IP65 waterproofing are more expensive than basic plastic units.

Safety and Compliance – UL listing, OSHA compliance, and built-in overload protection add to the price. Customization – OEM/ODM services, custom dimensions, or branding can increase cost.

### Purchasing Options

Online retailers like Amazon and BestMaterials offer ready-to-ship units in the $300–$800 range. Industrial suppliers such as Grainger provide a variety of temporary power distribution boxes with real-time availability and support for larger projects. Direct manufacturers (e.g., Yueqing Beigang) can provide custom units with OEM specifications, which is ideal for specialized applications.

For an accurate quote, you should provide technical specifications, quantity, amperage, outlet configuration, and intended application to the supplier. This ensures the price reflects your exact requirements and any customization needed.
