Principle of Explosion-proof Intermediate Joint Box

Overview

The Cable Intermediate Joint Explosion-proof Box plays a critical role in ensuring electrical connections remain secure in hazardous zones. As industries evolve, so do the applications for. Mainly suitable for intermediate connection of cables. It begins by introducing the composition of cable systems and the structural features of the 220 kV prefabricated cable joint. Next, the article. The utility model provides a 10kV cable intermediate head explosion-proof box, for the variable cross section cylinder plus pressure release hole trompil structure, the multiaxis trompil of pressure release hole is in the torus both sides of exploding, and the material is 304 stainless steel, total. In response to these problems, the company has developed a cable intermediate joint box with fireproof, waterproof and explosion-proof functions to provide all-round protection.
