# Small winch for pulling optical cables

## Overview

These cable winches are designed to support the installation of fibre optic cables to the telecommunications industry – the winches were developed to meet the requirements for both the installation of delicate Fibre Cables where low pulling tensions are necessary and also for the more. These cable winches are designed to support the installation of fibre optic cables to the telecommunications industry – the winches were developed to meet the requirements for both the installation of delicate Fibre Cables where low pulling tensions are necessary and also for the more. Take on any cable-pulling job with Willy Winch capstan winches. Built for primary and secondary power lines, fiber optic cable, and underground utility work, these winches give crews steady, controlled tension on every run. 7″ Capstan – Small, tough, and ready for everyday work. Delivers strong. Thorne & Derrick International distribute the most extensive range of Cable Pulling & Cable Laying Equipment to enable the installation of low, medium and high voltage power cables into underground trench or duct – products also supplied for fibre optic blowing, subsea trenching, offshore umbilical. Our cable pulling winches are engineered to help you safely, quickly and efficiently pull heavy cable. All of the units are designed with the operator in mind. Simple in operation and robustly engineered, these units are fitted with heavy duty diesel engines. ➡ The range of trailer mounted cable pulling winches are used for the installation of LV, MV & HV power cables where high cable pulling tensions are required.
