South Asia Fireproof Cable Tray Specifications and Prices

Overview

Shop high-quality fireproof cable trays from reliable suppliers. Durable, perforated, and powder-coated for indoor and outdoor use. Bulk orders welcome.

Key Takeaways

Fireproof cable trays in South Asia typically range from $2 to $15 per meter depending on material, type, and supplier, with bulk orders and customization affecting final pricing.

Price Overview

Fireproof cable trays are available in various materials including galvanized steel, stainless steel (304/316), aluminum, and fiberglass-reinforced polymer (FRP), each affecting cost and suitability for different environments. In India, for example, coupler plates for 25–50 mm height cable trays are priced around ₹16 per piece, while 75–100 mm trays cost about ₹30 per piece, with GST and delivery charges extra. Prices in other South Asian countries like Bangladesh, Sri Lanka, and Nepal are generally comparable, though shipping and import duties may increase costs.

Material and Type Considerations

Galvanized Steel: Economical, strong, and suitable for indoor and outdoor use; ideal for heavy-load applications. Stainless Steel (304/316): Offers superior corrosion resistance, suitable for coastal or chemical-prone environments. Aluminum: Lightweight, corrosion-resistant, and easier to install in large-scale projects.

FRP/GRP: Non-conductive, highly resistant to chemicals and moisture, ideal for industrial or high-risk environments. Tray types include ladder, perforated, wire mesh, solid bottom, and channel trays, each designed for specific airflow, cable protection, and installation requirements.

Supplier and Ordering Information

Alibaba and Made-in-China list multiple South Asian suppliers offering custom lengths, powder-coated finishes, and bulk order discounts. Local Indian suppliers like M. G.

Cable Industries provide ex-stock delivery within 3–5 days for minimum orders of 50 meters, with pricing subject to change. Lead times for customized trays typically range from 10–30 days, depending on material, size, and order volume.

Additional Considerations

Fireproof cable trays are designed to comply with NFPA 70 (NEC), IEC 60332, and local fire safety codes. Combining trays with firestop systems or intumescent coatings enhances fire protection. Bulk orders and modular designs can reduce installation costs and ensure faster deployment in large projects.

For accurate pricing, it is recommended to contact suppliers directly with specifications such as tray material, height, width, and length, as well as any required certifications or coatings. This ensures a tailored quote suitable for your project and location.
