

Specifications and Models of West Asian Mesh Cable Trays

Overview

Wire Mesh Cable Trays Explore high-quality wire mesh cable trays from Patil More Exports. Customizable sizes, durable stainless steel and galvanized finish.

Key Takeaways

Mesh cable trays, also known as wire mesh or basket trays, are available in various models including standard wire mesh trays, stainless steel trays, galvanized trays, and custom-designed trays for industrial, commercial, and IT applications in West Asia. Common Models and Types1. Standard Wire Mesh Cable Trays (Basket Trays) These are the most widely used mesh cable trays, constructed by welding steel wires into an open-grid structure.

They are lightweight, flexible, and allow 360-degree ventilation, making them ideal for IT rooms, server racks, and commercial buildings. Standard trays are available in various widths, heights, and lengths, often in 3-meter sections with optional bends of 30°, 45°, or 90° for multi-directional cabling and easy reconfiguration (West Port Middle East). 2.

Stainless Steel Wire Mesh Trays Designed for environments requiring high hygiene or corrosion resistance, stainless steel trays are commonly used in food and beverage industries, hospitals, and chemical plants. They provide durability, prevent dust accumulation, and allow safe handling during installation (Delta Cable Trays). 3.

Hot-

Dip Galvanized Wire Mesh Trays These trays are coated with zinc to resist corrosion, making them suitable for outdoor installations, industrial facilities, and infrastructure projects exposed to moisture or harsh conditions. They are widely used in Saudi Arabia, Oman, and Qatar for industrial and energy projects (Delta Cable Trays). 4.

Electro-

Zinc Coated Wire Baskets Electro-zinc trays offer moderate corrosion protection and are often used in commercial and residential projects where cost-effectiveness and lightweight design are priorities. They are flexible and can be cut or shaped to fit complex layouts (Delta Cable Trays). 5.

Custom-

Designed Mesh Trays Manufacturers in West Asia provide custom solutions tailored to specific project requirements, including unique dimensions, bends, and finishes. These are particularly useful for large-scale industrial projects, tunnels, metro stations, and high-density IT installations (Al Fazal Engineering). **Key Features Across Models** Open-grid design for ventilation and heat dissipation Lightweight and flexible for easy installation and reconfiguration Tool-free adjustability for rapid layout changes Corrosion-resistant finishes including stainless steel, hot-dip galvanized, and powder-coated options Compatibility with vertical and horizontal mounting in compact spaces **Applications in West Asia** Commercial Buildings: Offices, malls, and IT networks Industrial Facilities: Factories, power plants, and manufacturing units Food & Beverage Industry: Hygienic installations requiring stainless steel trays Residential Projects: Safe and concealed wiring Infrastructure & Transport: Tunnels, railways, and metro stations Manufacturers in the UAE, such as West Port Middle East and Delta Cable Trays, supply these mesh cable trays across West Asia, including Oman, Qatar, Bahrain, Kuwait, and Saudi Arabia, ensuring compliance with international standards and providing accessories for efficient cable routing (West Port Middle East; Delta Cable Trays).
