Your Spectrum router has an internal firewall that blocks certain apps and devices from accessing the internet. This wikiHow article will teach you how to set up port forwarding on your. Spectrum port forwarding can be one of the most common reasons you're unable to connect to your remote computer or play games on a self-hosted dedicated server with your friends. Every time a device on the internet communicates with another device, it sends data packets through a specific entry point known as a port. Common issues include firewall problems, interference from the DMZ, multiple instances of the same port being forwarded, and using multiple routers.
