What causes a TP-Link access switch to stop working unexpectedly

Overview

A switch failure can result from several issues, including: Power Supply Issues – Switch not powering on or experiencing power fluctuations. Faulty Ports or Cables – Damaged Ethernet cables or non-functional ports. Some times i experience the problem below: While switch working and all ports led indicators are on,suddenly 1 port goes off and led indicator goes off as well. If I take the cable from the modem that is connected. A windows laptop, windows desktop PC, and Phillip Hue Bridge are connected to the switch via ethernet. Problem/History: To start, I've never had any issues with wifi in my house. Never need to power cycle the router or modem. It only looks at the first 14 btyes of a packet that has mac addresses in it everything else is considered payload. However, for almost all of these technical problems, there are four simple solutions that you can try at home, by yourself.
