What types of cable trays are included in Kenyan cable trays

Overview

Get durable, high-performance cable trays engineered for efficient cable support, safety, and long-term reliability.

Key Takeaways

Kenyan cable trays include ladder trays, perforated trays, solid bottom trays, wire mesh trays, trunking trays, and busway trays, made from materials like galvanized steel, stainless steel, aluminum, PVC, and fiberglass.

Common Cable Tray Types

Ladder Cable Trays Ladder trays feature two side rails connected by cross rungs, providing maximum ventilation and support for heavy cables. They are ideal for industrial and commercial installations where airflow and heat dissipation are important. Perforated Cable Trays These trays have ventilation holes along the base, offering a balance between cable protection and airflow.

They are commonly used in areas requiring moderate ventilation, such as offices or commercial buildings. Solid Bottom Cable Trays Solid bottom trays provide full protection for sensitive cables, making them suitable for data centers, control rooms, and environments where cable security is critical. They prevent dust, moisture, and debris from contacting the cables.

Wire Mesh Cable Trays Wire mesh trays are flexible and lightweight, allowing easy access for cable installation and maintenance. They are often used in office spaces, commercial buildings, and areas with frequent cable changes. Trunking and Channel Trays Trunking trays are compact and ideal for low-density installations or tight spaces, while channel trays provide a robust solution for heavy-duty cable routing.

Busway Trays Busway trays are designed for high-load power and control distribution, commonly used in electrical rooms, substations, and industrial facilities.

Materials Used

Cable trays in Kenya are fabricated from a variety of materials depending on load requirements and environmental conditions: Galvanized Steel – corrosion-resistant, suitable for indoor and outdoor installations. Stainless Steel – ideal for corrosive or high-humidity environments. Aluminum – lightweight and resistant to corrosion, often used in industrial or commercial settings.

PV

C and Fiberglass – non-metallic options for explosion-proof or highly corrosive environments.

Applications

Cable trays are extensively used in industrial, commercial, and residential projects, including: Factories, plants, and warehousesData centers and IT infrastructureHospitals, hotels, and supermarketsUnderground mines, tunnels, and water treatment facilities These trays are customizable in size, thickness, and material to meet specific project requirements, ensuring efficient cable management, safety, and long-term reliability.
