Overview

Power Temp Systems delivers construction site power solutions ranging from temporary power panels and distribution boxes for job sites to permanent solutions for construction projects.

Key Takeaways

Temporary electrical distribution boxes, also known as spider boxes or ACS panels, provide safe, portable power for construction sites and can be purchased from specialized suppliers or general retailers.

Types of Temporary Distribution Boxes

Spider Boxes: Compact, rugged, and portable units designed for construction, disaster relief, and events. They typically feature multiple outlets, GFCI protection, and durable enclosures to withstand repeated transport and harsh conditions (Power Temp Systems).

S Panels (ENERGYBOX): Wall-mounted or support-mounted boards made from fire-resistant technopolymer, suitable for civil building sites, outdoor events, and temporary electrical distribution. These can be reused across multiple sites (Palazzoli). Standard Temporary Power Boxes: Economical and safe units with GFCI-protected outlets, circuit breakers, and rugged construction for general construction site use (Lowe's, Amazon).

Key Features to Consider

Safety: Look for boxes with GFCI protection, circuit breakers, and overload prevention to protect workers and equipment. Portability: Choose lightweight, compact designs for easy transport and setup, especially for spider boxes. Durability: Ensure the enclosure is resistant to corrosion, impact, and environmental conditions.

Outlet Configuration: Select a box with enough outlets and amperage to support all tools and equipment on site. Customization: Some suppliers offer custom configurations to match specific project requirements.

Where to Buy

Online Retailers: Amazon offers a variety of temporary power distribution boxes with multiple outlet configurations and circuit protection. Specialized Suppliers: Thermon and Power Temp Systems provide rugged, portable spider boxes and temporary power solutions for construction and industrial sites. Hardware Stores: Lowe's carries temporary power distribution boxes like Southwire's X-TREME units, suitable for general construction use.

Manufacturer Direct: Palazzoli ENERGYBOX panels can be purchased directly for pre-wired, reusable construction site boards.

Tips for Purchasing

Assess Power Needs: Calculate total amperage and number of outlets required for your site. Check Compliance: Ensure the box meets local electrical codes and safety standards. Consider Reusability: For recurring projects, invest in durable, reusable panels.

Plan for Setup: Choose units that are easy to transport, mount, or place on supports. By evaluating your site's power requirements, safety needs, and portability, you can select the most suitable temporary electrical distribution box for construction projects.
